The industry is making a shift from Waterfall (sequential) methods to Iterative, Incremental (Agile) methods

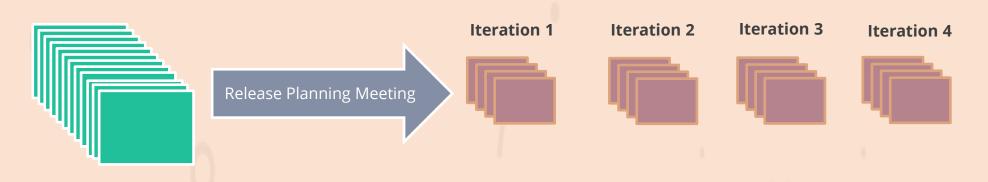

Proper understanding of the roles and duties is important for success of a scrum team

## **Knowledgeable: Committed:** Be an expert in scrum with an Will do whatever it takes to help understanding of the the team become better and technical environment overcome impediments **Humble:** Be able to let the team get the Influential: glory without letting Be able to influence ego get in the way without any authority Patient: **Collaborative:** Will not impose opinions and Create a culture of decisions on the team and will wait collaboration in the team for the team to decide

Agile teams must maintain a balance of long term and shortterm planning to organize their work

Stories targeted at the release

Stories tentatively assigned to specific iterations
